## CAREER OBJECTIVE

Full Stack Developer with 3+ years of experience building production-grade applications using Python, Django, and FastAPI. Strong in backend systems, REST/GraphQL API development, multi-tenant architecture, and async processing with Celery. Proven ability to lead projects end-to-end and deliver measurable business impact.

## SKILLS

|                          |                                                                   |
|--------------------------|-------------------------------------------------------------------|
| Programming Languages    | Python, JavaScript, SQL                                           |
| Backend                  | Django, DRF, FastAPI, SQLAlchemy, GraphQL, REST APIs, JWT, Celery |
| Frontend                 | React.js, Next.js, Redux, HTML, CSS, Tailwind CSS, Bootstrap      |
| Databases                | MySQL, PostgreSQL, MongoDB, Redis                                 |
| Cloud & DevOps           | Docker, GitHub Actions (CI/CD)                                    |
| Architecture & Practices | OOP, API Integrations, Multi-Tenant Design, Webhooks, Logging     |
| Tools                    | Git, VS Code, SSH, Postman                                        |

## EXPERIENCE

|                                                                  |                                       |
|------------------------------------------------------------------|---------------------------------------|
| <b>Freelance Full Stack Developer</b><br>Independent Client Work | Jan 2026 – June 2026<br><i>Remote</i> |
|------------------------------------------------------------------|---------------------------------------|

- Built and maintained full-stack web features independently, with full ownership of technical decisions, architecture, and delivery in a remote async client environment.

|                                                      |                                                |
|------------------------------------------------------|------------------------------------------------|
| <b>Full Stack Developer</b><br>Zerosoft Technologies | Dec 2022 – Dec 2025<br><i>Tuticorin, India</i> |
|------------------------------------------------------|------------------------------------------------|

- Built and maintained scalable full-stack applications using Django, React, and Python with focus on performance, security, and reliability.
- Progressed into a project lead role — managed task allocation, sprint planning, and delivery timelines for a team of developers.
- Designed and integrated third-party APIs and automation workflows, reducing manual operations; gathered client requirements and mentored junior developers through code reviews.

## PROJECTS

### Game Key Purchase Automation (Eneba + Microsoft APIs)

- Designed an end-to-end order fulfillment automation system — an Eneba webhook triggers a Microsoft API purchase, validates the key, and returns it for fulfillment in real time.
- Built backend services in **Django + GraphQL** to handle order intake, API orchestration, key validation, and fulfillment responses.
- Implemented **Celery**-based async workflows with retry logic, exponential backoff, and structured **logging**, **reducing manual operational work by 70%+** and improving fulfillment reliability.
- Tech:** Django, Python, GraphQL, Django ORM, DRF, MySQL, Celery, Redis, Webhooks, React.js

### CAD Drawing Generator for Kitchen Hood Manufacturing

- Developed a **Django backend** integrating with a PHP CRM via **REST APIs** to auto-generate CAD drawings on demand, pre-filling a review form and producing production-ready DXF files with **ezdxf**.
- Cut drawing preparation time from up to 1 hour to under 5 seconds** per job, reducing manual drafting time by ~80% and eliminating a significant bottleneck.
- Tech:** Django, Python, ezdxf, REST API Integration, HTML, Bootstrap

### Pristine – Multi-Tenant SaaS Platform for Chicken Farm Management

- Built a chicken farm management platform for tracking growth cycles – bird count, health, feed/water intake, mortality/retention; initially **Dockerized** and self-hosted by **10+** clients on their own local networks.
- Led the migration to a **multi-tenant, cloud-hosted** architecture – a super-admin service provisions an isolated **database, user, and credentials** per tenant, avoiding shared-database backup and isolation issues.
- Implemented per-tenant **SQLAlchemy** connection routing with caching on first login, auto-directing each user to their dedicated database with zero manual configuration.
- Tech:** Next.js, FastAPI, SQLAlchemy, MySQL, Docker

## EDUCATION

|                                                                                                              |           |
|--------------------------------------------------------------------------------------------------------------|-----------|
| <b>B.E. / Electronics and Communication Engineering</b><br>St. Mother Theresa Engineering College, Tuticorin | 2017–2021 |
